

AGN. NO. _____

MOTION BY MAYOR MICHAEL D. ANTONOVICH

AUGUST 29, 2006

The former Rocketdyne Santa Susana Field Laboratory straddles the boundary between Ventura County and Los Angeles County near unincorporated Chatsworth. Although the property known to be contaminated with perchlorate, recent reports disclosed that thousands of pounds of dangerous materials, such as napalm and dioxins, were burned in open pits on the property as late as 1990. These reports present a new series of questions about soil and ground-water contamination, as well as potential impacts on surrounding properties.

I, THEREFORE, MOVE that the Director of Public Works and the Director of Environmental Health investigate what measures are being taken to address this new information, consult with Federal and State agencies involved in monitoring the remediation efforts, and report back to the Board within 30 days.
